

NexSys PCS[®]

Plasma Collection System

Elevate your business performance

More productivity. More value.

INTEGRATED DEVICES

HAEMONETICS[®]

Focused on your needs

Inspired by extensive customer input, the NexSys PCS[®] plasma collection system and NexLynk DMS[®] donor management system are designed to improve the key performance indicators that matter to you.

Productivity

Streamlining and automating processes to help **shorten door-to-door time, improve donations per employee hour and accelerate collections.**

Quality & Compliance

Minimizing the risk of errors to help **ensure donor safety, plasma quality, and regulatory compliance.**

Yield

Helping **maximize yield and minimize cost per liter** to make the most of every collection.

Donor Satisfaction

Enhancing the donor experience with features designed to **increase staff responsiveness, reduce wait times and ultimately drive improved donor retention and donation frequency.**

Maximize your collection capacity

Productivity

Increase Productivity

Open, bi-directional BECS connectivity, including integration with NexLynk DMS, helps eliminate inefficient, paper-based processes and the need for PDA-based phlebotomy documentation systems.

Simple, guided operation via intuitive touchscreen is designed to streamline collection processes.

Large alert beacon enhances operator responsiveness, helping accelerate donor throughput.

Simple serviceability helps maximize device uptime and reduce staff time spent on maintenance.

Shown configured with Persona Technology

Improve Quality & Compliance

Automated procedure programming is designed to help avoid overdraws and underdraws, minimizing exceptions and protecting donor safety. Helps reduce time-consuming QA paperwork, freeing up staff to focus on donor processing.

Integrated documentation and guided workflows during the procedure help ensure compliance protocols are met for every collection.

Increase Yield

Yield Enhancing Solution (YES)[®] option enables your organization to collect up to 3% more plasma with every donation, using the legacy simplified nomogram.¹

Automated procedure programming is designed to reduce manual procedure programming errors that can lead to underdraws, further improving overall collection capacity.

Persona[®] technology is an integrated proprietary plasma collection solution clinically shown² to yield +9-12%* more plasma per donation on average.

Strengthen Donor Relationships

Streamlined processes at every step—from setup, programming, and troubleshooting to disconnect—minimize wait times, helping ensure greater donor satisfaction and retention.

Integrated beacon is designed to improve staff responsiveness to completed collections and issues requiring attention—such as low flow conditions—reducing donor time on bed.

Quiet operation and **improved donor information display** further enhance the donor experience.

¹ Incremental yield for YES compared to the standard nomogram run on the PCS[®]2 device equipped with AC Short Prime.

² Hartmann et al. Personalized collection of plasma from healthy donors: A randomized controlled trial of a novel technology-enabled nomogram. Transfusion. 2021 Mar 24. <https://doi.org/10.1111/trf.16389>

* Based on baseline device, software configuration and donor population.

Turn data into a competitive advantage

The NexLynk DMS donor management system is designed to tap the full power of the NexSys PCS® system to help drive new levels of plasma center efficiency and compliance, while enhancing donor safety.

Experience bi-directional integration and data exchange between the NexSys PCS and NexLynk DMS, which provides detailed processing information, helps reduce inefficient manual processes, and can help minimize the potential for manual programming and data errors that can lead to overdraws and underdraws.

Improve center efficiency by codifying your SOP with software that facilitates each step – from donor questionnaire, screening and queue management to plasma collection, donor payments and quality assurance. Data integration helps reduce the potential for errors, and analytics and reports give your staff the insights they need to improve productivity and efficiency.

Ensure data accuracy and documentation compliance with automation that reinforces your SOP, integration that helps reduce data errors, and reporting that simplifies supporting audits.

Increase donor satisfaction with shorter wait times and an improved ability to engage donors personally and consistently, which can lead to greater donor engagement, increased donation frequency, improved retention, and even more referrals.

Business Optimization Services

Haemonetics Business Optimization Solutions help plasma collectors take full advantage of the capabilities of our plasma collection systems and software, by analyzing customers' processes and making recommendations to improve the performance and cost effectiveness of collection centers.

Key objectives include:

- Streamlining processes to **achieve greater operational efficiency**
- Identifying opportunities and approaches to **decrease collection costs**
- Helping to reduce wait times and improve donor service levels to **drive improved donor satisfaction, retention, and donation frequency**

Contact us today to learn how Haemonetics can help optimize your collection productivity, efficiency, and capacity.
